

## BEVRC 3-chan mini camera switcher

### Connection:

### Power:

The mini switcher is powered by your radio receiver, the voltage range can be 3.3-6v, the power of the cameras and the video Tx are separated with the power of the mini switcher, and they are connected, so if your camera or video Tx works at the same voltage, such as 12v or 5v, you can connect them directly and power any one of them.

### Warning:

Among the 3 cameras and one video Tx, if they work at different voltages, for example, some work at 12v, some work at 5v, you should be careful to power them, because their power lines are connected together, then you should offer them with right voltage using some voltage regulator.
